I Grow the Best — Discard the Rest

Greetings . . . To My Friends:

It is with pleasure that I present you with this, my Dahlia Catalogue for 1952. Your generous and kind support is thoroughly appreciated and inspires me to continued effort to make available to you only the best.

This catalog would not be complete if I were not to take advantage of the opportunity to thank you for your many letters telling of various successes obtained from stock purchased from me. I am grateful to those who have been able to visit my gardens as well as those who have inspected my exhibits at the American Dahlia Society Shows, and many other shows we attend, because I feel my dahlias speak best for themselves.

To those who are familiar with my stock, no introduction is necessary and you have my pledge that the same quality will not only continue but improve if such is possible. To those who have not tried my service this is an invitation, an invitation that may prove a real opportunity for you to realize something you may not have been able to obtain elsewhere and no order is too small nor is any contract too large, I am pleased to serve you.

ALBERT PARRELLA.

IMPORTANT NOTICE — DO NOT OVERLOOK

Due to the limited space we are compelled to be brief with our descriptions. However, we want our patrons to know that the varieties listed in this Catalog are either Honor Roll Certificate Winners or has proven with us to be truly outstanding. Not only that, but the varieties offered are reliable in every respect, good growers, fine producers, insect resisting foliage and most of them are of large size blooms, and true prize winners. If you are interested in large size dahlias, you surely are not going wrong by ordering from us. This may be of interest to you to know that we do not force our dahlias for size, but we are gratified to know that our customers secure the lion's share of prizes at the Show.

VISITORS ARE WELCOME

You are cordially invited to bring along as many friends as you possibly can to my gardens at any time after August 15th and see this magnificent sight. You are under no obligation to buy, but welcomed and I will be as happy to see you as you will be to see this magnificent collection of gorgeous massive flowers in all of the colors, shades, and tints of the rainbow.

I will have over 300 varieties, most of them Honor Roll dahlias, as well as many promising seedlings, and many new ones sent by other growers for trial and that have not been released for sales as yet, as well as many novelties.

We want to thank those who have sent to us Seedlings for trial this past season. Assure you we have given them the best of attention. We would appreciate receiving more of them for the coming season providing they are good. We will do all we can to put them over.

**TEN BRIEF SUGGESTIONS TO THE AMATEUR
ON HOW TO GROW BETTER DAHLIAS**

1. Select easily grown varieties and those giving full satisfaction.
2. Prepare the selected planting spot well and place the supporting stake.
3. Dig a hole next to the stake, about 10 inches in diameter and 7 to 8 inches deep, and place one handful of bonemeal in the hole, or any other recommended fertilizer and mix thoroughly with the soil before planting.
4. Place roots in flat position with the sprout or "eye" facing upwards. Cover lightly with about 2 inches of soil. In doing this be careful not to damage the sprout. As the plant grows, fill around the stem with soil.
5. Do not plant too early. At times, too early planting spoils good roots. I would suggest planting from June 1st on, except in climates where a short growing season is prevalent. In that case use your own judgment.
6. Keep the soil well cultivated throughout the season, and prevent weeds from outgrowing the plant.
7. Water plants during hot weather at least once a week. Do not merely sprinkle them, but soak them. This must be done after sundown.
8. Tie the plant to the supportive stake with soft cord, at distance of 12 inches apart. This is done as an added security against destruction by wind and storm. Spray with any reliable parasiticide at least once every two weeks.
9. About August 1st, scatter a handful of bonemeal about 6 inches around the stem and rake it gently into the soil. Other fertilizers may be used if desired. Do not use excessive amounts of fertilizer as injury to the roots will result.
10. About August 15th, the same treatment as above is applied. Disbudding at this time aids in the formation of bigger and better flowers and longer stems. This should insure good results. If any other information is desirable, I will gladly forward you the same.

IMPORTANT

For home use or florist's trade, do not overlook these four (4) medium sized dahlias Gay-Gypsy Girl Dave Platt and Ruby Glow. These are wonderful producers of blooms on fine long stems, also good keepers after being cut. Truly a gold mine for the florist trade. Gay & Dave Platt received a gold medal at the New York Florist Club—Gypsy Girl and Ruby Glow are a fine companion to the others in the color class and a true prize winner at the Show.

DUKE

DUKE (Chappaqua-Parrella) — Miniature F. D. light blend of marigold orange on yellow base. Height of plant 3½ feet. Profuse bloomer on long stems. Long keeper when cut making it ideal for commercial purposes. Duke is an attractive little gem that was awarded the A.D.S. Silver Trophy at New York for best new small flower under 4 inches. If you want a prize winning miniature, don't pass up Duke. On Mr. Dudley's Honor Roll.

DAHLIAS: WHAT IS KNOWN ABOUT THEM

By: MORGAN T. RILEY

A NEW BOOK ON DAHLIA CULTURE

Publisher: Orange Judd Publishing Co.

Read what the critics say:

This is an ambitious title but the author covers the subject thoroughly in a masterful style.—Gardeners' Chronicle of America.

This book will be a useful guide to both professional and amateur grower, as it is written simply and directly, with a thorough knowledge of the subject.—Florists' Review.

Here is contained a most comprehensive history of the dahlia, replete with pictures from early publications, tracing the history of this exotic flower from its first findings in Mexico through its introduction into Europe and eventually to the United States.—New York Herald-Tribune.

The chapter on culture is most complete and covers all the aspects that any grower will look for. Here are all the details all growers need.

Mr. Riley gives some very important pointers on the care of plants and cut blooms that are to go to the show table. All the necessary suggestions that will help the grower to win blue ribbons are set forth in detail.—New York Herald-Tribune.

I have never read a more sensible book on the growing of one genus.—Golden Gardens. The entire volume is highly recommended.—Gardeners' Chronicle of America.

Above book can be secured through Parrella Dahlia Gardens

Price \$2.50, plus 7c postage.

HOW TO GROW DAHLIA FROM SEED

There are many ways that dahlia seeds are started, and grown, on account of the different climatic conditions, and the length of the growing season, here in New York City, I have been getting wonderful results as follows: About April 1st, I select an open sunny location in my garden and spade this to a depth of about 8 inches and rake the soil until it is finely broken, and not lumpy, then with a hoe make trenches about 4 inches in depth and about 12 inches apart.

Then place a seed about every 2 inches apart in these trenches and cover with about one half inch of soil, water lightly and cover with about 2 or 3 inches of peat moss, as a protection against a slight frost or cold. About May 1st carefully remove the peat moss and in another week or two you will see the young dahlia plants breaking through the ground, add a little more soil to the trench and around the plants that are showing above ground, so that they will get better and stronger root formation. About June 1st many of these plants will be about 4 or 5 inches above the ground, showing two to three sets of leaves and the stems will be about the thickness of an ordinary match. They are then about the right size for transplanting.

In colder climates and where the growing season is not so long, is to start the seeds in boxes or flats about 20 inches long, 12 inches wide and 4 inches deep. Make 3 or 4 trenches about 2 inches deep and plant the seed about every 2 inches apart in these trenches and cover with about a half inch of soil. These seeds should be planted about 2 months before it is reasonably safe to transplant the young plants out into the open.

The box should be kept in a warm room and near a window that faces a sunny location. About 2 or 3 weeks later, they will be breaking out of the ground and when they are about 3 or 4 inches high, they should be removed from the box and transplanted into 3 inch flower pots, and on warm, sunny days, should be left out into the open to gradually harden, and when you believe that the time is right for their permanent transplanting as described above, then plant them as directed, and they will grow into strong, healthy plants, as good if not better than plants grown from tubers.

Of course if you have a greenhouse or a cold frame facilities, it will simplify matters by starting your seeds about March 15th and using the above last two paragraph principles.
